Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Sizer, II et al. (5430819).

Sizer (Figures 1-9) shows an array ferrule for an optical fiber connector having a main body 202 with fiber receiving cavities for accommodating a plurality of fibers, a pair of pin slots 204, 205 for pins 206, 207 formed on opposite sidewalls and retention member slots in communication with the pin slots wherein an encapsulant 703 is used around the fibers to fill the fiber receiving cavity and retention members 211, 212 are secured in the slots 204, 205 to engage the pins.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sizer, II et al (5430819).

Sizer shows all the features of these claims as described in Paragraph 3 above except the use of a metallic material for the encapsulant. Metallic encapsulants are well known in the art of connectors. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to use metallic encapsulant because it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use. In re Leshin, 125 USPQ 416.

Allowable Subject Matter

6. Claims 5-15 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter:

Prior art does not show a method of making and assembly process involving a plurality of combs for accurately positioning a plurality of optical fibers in combination with other elements for an optical fiber ferrule as required by claims 5 and 9.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shahid et al. (5519798), Kiani et al. (20030044123), Ngo (6450697), Bonanni (4818058), Stuelpnagel et al. (6396995), Wiener (5280558) and Dannoux et al. (5447585).
